Getting Started with Parse.ly

- Introduction
- Configure Your Overview Screen
- Filters and Saved Views
- Traffic Status Alerts
- Parse.ly Bookmarklet and Overlay
- Reporting
- Glossary
- Additional Resources
Welcome!

Parse.ly offers an easy way to visualize content performance across platforms and channels to garner insights and drive meaningful results.

What Makes Parse.ly Different?

**Accessible, real-time insights**
By leveraging a heartbeat pixel to capture fresh data every several seconds, information is constantly updated to keep you on the “pulse.”

Use Parse.ly to understand:
- Where readers came from
- How to increase readership
- How to engage your audience

**Democratized data**
Parse.ly provides easy-to-understand dashboards and out-of-the-box reporting that supports teams with tangible information. You shouldn’t have to be a business analyst or write several scripts to untangle key metrics.

**Collected content analysis**
Instead of logging into several platforms and tools, Parse.ly provides a singular place to collect all of your performance data.

Add and analyze all of the following in one place:

- **On-site**: blogs, articles, landing pages, image galleries, video, audio, podcasts, and campaigns

- **Channels**: web, mobile, Apple News, Facebook Instant Articles, Google AMP, SmartNews, and iOS/Android apps

- **Social**: Facebook, Twitter, Pinterest

- **Search**: Google, Bing, Yahoo!, DuckDuckGo, and more
Configure Your Overview Screen
Customize the Overview Screen to quickly gather information and take action.

1. Click the cogwheel icons to choose metrics for each section of the Overview.
2. Set up alerts to email, desktop, or Slack.
3. Filter data by author, section, tag, or audience segments (if enabled).
4. Click the arrow icon to go to a full screen takeover. Customize this view separately and share a link for team meetings and executive summaries.

Using Filters and Saved Views

Leverage filters to focus the analysis of your data. Filters are available on each dashboard page as well as reports. Save filtered views for yourself or the team to access them quickly and easily in the future.

1. View dashboard pages that are focused on each metric.
2. Click to access filters to customize the content and data shown.
3. The filter will populate options based on site data. Use the drop down to select the desired match type (match any, match all, exclude) and then apply the filter. You can mix match types (i.e. “show me this, but not that”) as well as apply multiple filters.
4. Export, Schedule, or Save the filtered view to return to it in the future.

Enabling Traffic-Status Alerts

Automated alerts can keep you informed about changes in traffic on your site and with your content.

By default, alerts send when a post published in the last seven days has views per minute that exceed 95% of the max views/minute of all posts published on the site, specific section or by chosen author in the past 90 days.

Admins can customize these thresholds in the user menu under “Alerts.”

You’ll receive alerts for the following scenarios:

- **1x traffic spike:** A post’s views/min first exceeds the threshold
- **2x+ traffic spike:** A post’s views/min doubles, triples, etc the threshold
- **Still going strong:** A post’s views per minute is still above the threshold 6+ hours later
- **Back rising:** A post’s views/min falls below the threshold, but then surpasses the threshold again 6+ hours later

**Set Up**

For all alert types, click on the megaphone icon. Choose desired delivery type and follow instructions to send.

**Site Alert**

Found on the Overview screen

**Section or Author Alert**

From Sections or Author dashboards, select a specific section or author to be taken to the details page.

**Adjusting Alerts & Viewing History**

Navigate to Alerts in the User Menu to make changes, unsubscribe or view the history of received alerts.

Bookmarklet and Overlay for Google Chrome

There are two handy tools for instantly opening and visualizing data on your site to gather information at a glance.

**Parse.ly Bookmarklet**

**To add it:**
Simply go to [this page](#) and drag the green “Open in Parse.ly” button up to your Chrome bookmarks toolbar and it will be there for you to use in the future.

**To use it:**
While on a content page on your website that has Parse.ly installed, click the “Open in Parse.ly” bookmark.

**Parse.ly Overlay**

The Overlay allows Parse.ly users to view ranked content performance by position on high-volume pages, like home or section/category pages.

In order to provide statistical relevance, the Overlay will not provide data unless each link or slot has at least one click in the previous 10 minute timeframe.

**To add it:**
Login to your dashboard and navigate to [this page](#) and drag the provided link to your bookmarks bar.

**To use it:**
When on your homepage or another content aggregator landing page, click the “Parse.ly Overlay” link to load the visual tool.

**Metrics provided in the Overlay:**
- *Clicks per Minute* (previous 10 minutes) – Clicks on the selected slot divided by minutes
- % of Page Clicks – Clicks on the selected slot divided by total clicks on the page
  - % of Page Clicks (10 minutes)
  - Change in % of Page Clicks (10 minutes vs 6 days)
  - Historical % of Page Clicks (6 days)
- *Click-through Rate* – Clicks on the particular slot divided by total page views
  - Click-through Rate (10 minutes)
  - Change in Click-through Rate (10 minutes vs 6 days)
  - Historical Click-through Rate (6 days)
What Reports are Available in Parse.ly?

**Basic Reports**

**Top Listings**
Shows the top posts, authors, sections, tags, videos, or referrers. You can pick the metric, time period, and number of listings to display.

[View Example](#)
Also available as a spreadsheet export in CSV or XLSX file
[Download Example](#)

**Details**
Data summary for a particular author, section, tag, or for the whole site. It’s helpful for gauging performance during a certain time period, like the last week or the last month.

[View Example](#)

**Stats Over Time**
View how traffic has changed for a particular author, section, tag, or for the whole site. You can choose a metric and the level of granularity the stats should be grouped on.

**Advanced Reports**

**Evergreen Overview**
Focuses on content that attracts readers long after its publish date, like how-to or lifestyle content. This report compares the most-viewed evergreen content with the most-viewed content sitewide.

[View Example](#)

**Audience Overview**
Provides an in-depth analysis of visitor behavior. This report shows the engagement levels of visitors, who are divided into buckets based on how frequently they come to your site.

How to Create Reports in Parse.ly

Reports can be run ad-hoc or scheduled to run daily, weekly or monthly. The process to create a report is the same for all report types.

1. Navigate to the Report Detail Tab.
2. Click “Create Report”

3. Select the desired Report Type

4. Select the aspect (the subject or key detail) of your desired report. Note that Advanced Reports have a default aspect and will skip this step.
5. Choose the desired cadence and format of your report.
6. Click “Continue” to be taken to the next page to finalize.
How to Create Reports in Parse.ly (continued)

Once you have selected the type, aspect, cadence, and format, you’ll then select the specific parameters and filters.

If you’ve created a scheduled report then you’ll also specify where to send the report on a regular basis and have the ability to provide a brief report summary or detailed title for recipients.

1. Use the drop-down options to select specific parameters for your report.

2. Select desired filters to narrow down the content and data of your report.

3. You may choose several filters to work in conjunction to provide specific and detailed information.

4. Type in the emails of the people you’d like to autosend reports to, separated by commas or line breaks. If you have chosen to run the report just once, you won’t see this option. Provide a simple summary, or leave blank for the auto-generated summary.

4. Click save to run or schedule your new report!
Glossary

Parse.ly uses industry standard web analytics metrics and nomenclature, but there are a few terms specific to the dashboard that will be helpful to know.

**Engaged Time**

Most analytics platforms measure time on site and identify a “session” based on a user’s entry on the page and exit from the page. The Parse.ly tracker, however, constantly evaluates if a user is still active.

Parse.ly defines that by ensuring the browser tab is open and the user is engaging by moving their cursor (or finger), hovering, scrolling, clicking, watching a video, or listening to audio. After five seconds of inactivity, Parse.ly considers the user no longer engaged and stops tracking the time. If a user re-engages, that time is added.

You should use engaged time as an indicator of interest and reader loyalty. Dig into authors and subjects with high engaged time for ideas on how to expand and replicate!

**Evergreen Content**

Evergreen content refers to any page, post, or article that receives consistent visits and views above the typical trends and lifecycle of your website.

Because of the inherent value and high ROI of evergreen content, it’s important to identify what is working and use it to guide the creation of future pieces.

Some suggestions for creating timeless evergreen content:

- Pick a specific and precise topic
- Show authority with an expert understanding of the topic
- Make the format easy to follow with lists, tips, and visuals
- Optimize for search engines with regular keyword use and good technical SEO

**Metadata**

Metadata is data about other data.

Parse.ly uses metadata to analyze your content for attributes like publish date, content type, word count, author, section, tags, referrers, and URL. These groupings combine with over 40 metrics to provide understanding of content performance.
Glossary (continued)

**Posts vs. Non-Posts**
The difference between posts and non-posts is defined for each website via the “@type” metadata passed to Parse.ly.

Values recognized as posts: NewsArticle, Article, TechArticle, BlogPosting, LiveBlogPosting, Report, Review, CreativeWork

Values recognized as non-posts: WebPage, Event, Hotel, Restaurant, Movie

**Recrawl & Rebuild**
Parse.ly recognizes that sometimes metadata may be updated or changed. We offer the following services to ensure that your dashboard reflects accurate information.

**Automatic Recrawl & Rebuild**
Parse.ly’s crawler will revisit an active URL once an hour for the first 24 hours after publication in order to discover changes to metadata; when changes are found, the “last good crawl” wins and overwrites prior versions as a data rebuild.

**Requested Recrawl & Rebuild**
For changes to posts published in the last five days, account administrators can request a recrawl and rebuild of historical data directly within the dashboard User Menu under API settings.

For posts older than 5 days, please email support@parsely.com. Please note that a system-wide recrawl and rebuild can only be completed once in the annual contract scope.

**Smart Tags**
Similar to standard content tags that creators implement throughout their sites, Parse.ly uses machine learning models to apply tagging to all new posts with 300+ words published after April 1, 2021.

**High-level Smart Tags**
Roughly analogous to sections and based on the Internet Advertising Bureau’s content taxonomy, these AI driven tags are aggregated into broad categories (Sports, Health & Fitness, etc). They’re displayed on a blue background with a dotted blue line and flag in the top left corner.

**Low-level Smart Tags**
Based on individual entities and subjects within a post, these low-level smart tags are typically things like names, objects, events, and places. Their taxonomy is built on Wikipedia entries. They are displayed on a white background, with the same dotted line and flag.
